# Cloud Computing Project 2 Specification

Cloud Computing  
Fall 2023

## Goal

Realize the task from Project 1 with the use serverless computing solution.

## Web Application

### Task

Besides the user interface specified in Project 1, add the following:

- Specify the number of concurrent calculations
- Start calculation via serverless service
- Display the table from Project 1

### Programming Language

Your choice

## Serverless

Create an event-driven architecture that allows integration of serverless services. The web application will create files in the storage. Each new file in the storage will trigger the execution of a serverless service.
